

GAUSSMETER HGF

MEASURING INSTRUMENTS

- ✓ Easy to use for precision measurements.

The HGF hand gaussmeter is an easy-to-use precision instrument. The flux densities of the 1 mm probe can be measured extremely close to the magnetic pole and in very small spaces.

The HGF can be switched between AC and DC magnetic adapters as well as between Gaus and Tesla units.

At the edge of the display the N / S suspended polarity is in the "fields magnetic DC" mode constantly displayed, and the "peak indicator" facilitates the search for magnetic surfaces, for example, in monitoring residual magnetism.
